APPLICATION INFORMATION

The SGM05FB2E2 is applied to offer a bidirectional line in order to eliminate ESD events on high-speed signals. The device is a good choice for lines with positive and negative signal polarity relative to the ground.

Figure 3. Application Diagram

The recommended guidelines are as follows:

1. TVS Placement

Place the TVS as close as possible to the input connector.

2. TVS's Trace Layout

Avoid running protected traces in parallel with unprotected traces.

Minimize the path length between the TVS and the protected line.

Minimize parallel signal path length.

Route the protected traces as straight as possible.

3. GND Layout

Avoid using a common ground point shared with the TVS transient return path.

Minimize the length of the TVS transient return path to ground.

Use ground vias as close as possible to the TVS transient return to ground.
